OBJECTIVE

Motivated and detail-oriented Information Technology undergraduate student with a solid background in the fields of software development, machine learning, and web technologies. Proven ability to create practical solutions, optimize system efficiency, and work efficiently in a team-driven environment. Passionate about continuous learning and the practical application of skills to solve real-world problems and create high-quality solutions.

EXPERIENCE

- APSCHE SmartBridge** Remote
ML Intern May 2025 – July 2025
 - TrafficTelligence:** Architected and deployed a production-grade ML web application for real-time urban traffic forecasting, integrating model inference with a live data pipeline and interactive frontend.
 - Model Engineering:** Engineered ensemble Random Forest classifiers achieving 87% predictive accuracy via systematic feature engineering on structured traffic telemetry datasets.
 - Hyperparameter Optimization:** Applied grid search cross-validation with stratified k-fold splits to tune estimator depth, min-sample thresholds, and tree count, reducing overfitting and improving generalization on held-out evaluation sets.

EDUCATION

- Anil Neerukonda Institute of Technology & Sciences (ANITS)** — B.Tech, Information Technology 2022 – 2026
- Sri Chaitanya Junior College** — Intermediate (MPC) 2020 – 2022
- Kendriya Vidyalaya** — CBSE Class X 2019 – 2020

PROJECTS

- Bank Management System (Java Application)**
 - System Architecture:** Architected a multi-module banking system in Java leveraging OOP paradigms — encapsulation, inheritance, and polymorphism — to enforce strict separation of concerns across account, transaction, and authentication layers.
 - Core Feature Engineering:** Implemented secure credential authentication, account lifecycle management, real-time balance computation, deposit/withdrawal processing, and peer-to-peer fund transfer with atomic operation guarantees.
 - Data Integrity:** Enforced robust input validation, custom exception hierarchies, and logical boundary checks to prevent invalid state transitions, ensuring transactional consistency across all banking operations.
- Expense Tracker (HTML, CSS, JavaScript)**
 - Frontend Architecture:** Engineered a fully client-side expense management SPA using vanilla HTML5, CSS3, and JavaScript — implementing component-driven DOM structure with zero framework dependencies for lightweight, fast rendering.
 - Core Feature Engineering:** Implemented full CRUD operations (create, edit, delete) for expense records with category-wise classification, real-time running totals, and dynamic summary insights — all driven by event-driven JS logic without page reloads.
 - UI & Responsiveness:** Built a fully responsive layout using CSS Flexbox/Grid with adaptive breakpoints, ensuring consistent cross-device rendering across desktop, tablet, and mobile viewports.

SKILLS

- Programming Languages:** Java, Python
- Web Technologies:** HTML, CSS, JavaScript, FastAPI
- Databases:** SQL, DBMS concepts, PostgreSQL
- Core Subjects:** Computer Networks, Operating Systems, Object-Oriented Programming (OOPS)
- Tools & Platforms:** Visual Studio Code, GitHub
- Soft Skills:** Collaboration, Analytical Problem Solving, Adaptability, Effective Communication

CERTIFICATIONS

[VIEW CERTIFICATES](#)

- NPTEL:** Programming in Java
- IBM SkillsBuild:** Getting Started with Artificial Intelligence
- Infosys Springboard:** Introduction to Cloud Computing
- HP:** Fundamentals of Data Analysis

VOLUNTEER & ACTIVITIES

- Active member of the NSS unit at ANITS; participated in multiple social and technical initiatives.
- Participated in a National Level Hackathon on Augmented Reality organized by Brain O Vision, gaining exposure to collaborative problem-solving.
